- Some add-on courses of Visual Arts & Craft, Interior Designing, Bakery, Fashion Designing, Computer Courses, Dietetics.

2. Best practices in Best use of Waste

Waste is anything that people do not value anymore and would love to throwaway. Best out of waste is a process in which we can make some new products out of waste things. This is a method in which wastes can be controlled. This method should be practiced by everyone. We organized training cum workshops on making decorative and useful items out of waste materials so students learnt this art and made various articles of decoration and reuse them like pen stands, wind chimes, wall hangings, greeting cards, tables & chairs, plant pots, carry bags, foot mats, dustbins etc. All these items were put on sale in an exhibition held in college and sale proceeds were spent on welfare of students. To make above mentioned craft articles, these waste materials like plastic bottles, paper plates, cups, empty cartons, old newspapers, ice-cream sticks, old tyres, waste iron pipes, used fabric strips, tin canes, fused bulbs, CFLs, LEDs, old CDs and old bottle caps are used.

By using of this, these Environmental and Social Benefits:

1. Giving employment opportunity to students by using their creativity in a positive manner.
2. Proper utilization of waste products.
3. Protects environment.
4. Reduces pollution and global warming.
5. Conserves resources.

6. Gets new things out of waste.

7. Institute and surrounding area will be clean and neat
